BIRDS ON THE BRINK

A visually captivating and informative look at the threatened bird species of South Africa and its oceans, and of Lesotho and Eswatini. The book highlights the beauty, unique traits and vulnerabilities of these birds, while vivid accounts from researchers on the front lines offer insight into the dedication and skills required to safeguard these species. *Birds on the Brink* is a call to action and a reminder that while the challenges are immense, so, too, is our capacity for change.

STUARTS' FIELD GUIDE TO THE LARGER MAMMALS OF AFRICA

This book focuses on the more visible and easily distinguished larger mammal species that occur in Africa, as well as some of the more frequently seen smaller mammals.

Features include:

- detailed descriptions of each species, offering insight into key identification characters, typical behaviour, preferred habitat, food choice, reproduction and longevity
- full-colour photographs of each species to aid identification
- distribution maps
- colour-coded grouping of orders
- size icons and track illustrations
- whales and dolphins featured too

Addresses the alarming state of lion populations in Africa today

THE LAST LIONS

Lions are the stuff of legends. Both majestic and terrifying, they once reigned supreme over an extensive domain. But the original range of this once-dominant beast has contracted by some 85%, and the world population is thought to have dropped to just over 20,000 individuals. The IUCN now classifies lions as Vulnerable, and the West African subpopulation as Critically Endangered.

Lions are disappearing from our planet at an alarming rate. We are stealing their habitat, their heads as trophies, their skin as mats, their claws as talismans and their bones for fake 'tiger wine'. Lions are in terrible trouble.

This landmark book aims to halt the downward spiral. It assembles the accounts of 34 top scientists and conservationists and showcases the searing, inspiring images of some of the world's most celebrated wildlife photographers. Along with the bad news, it offers a message of hope, showing how our approach to human-lion coexistence is being reimagined. This book, created to change the course of history, is a clarion call take action before it's too late.

POLLINATORS, PREDATORS & PARASITES

A detailed and intimate insight into the beauty and diversity of southern African insects within the region's 13 distinct biomes. The book scrutinises the essential roles that insects play in processes such as pollination, predation, parasitism, soil modification and nutrient-recycling. It also highlights their value as an essential food source for multitudes of other organisms, from bacteria through to mammals.

Marine & Freshwater

These titles explore both marine and freshwater habitats: their composition and what lives in them. Titles range from ID guides to more detailed studies of the various ecosystems. See also our series guides on pages 18–21.

NEW

This expanded and fully revised edition to the freshwater fishes of southern Africa brings the subject fully up to date. The region's more than 300 indigenous species are described as well as many of the alien species.

Geology & Popular Science

Books about geology, evolution, ecology and related popular science themes make complex subjects accessible to the general reading public.

CRADLE OF LIFE

The Story of the Magaliesberg and the Cradle of Humankind

The Cradle of Humankind World Heritage Site, situated in the heart of the Magaliesberg Biosphere Reserve, has attracted worldwide interest for the clues it offers to our evolutionary heritage. Be guided along a timeline, from the birth of our planet to the most recent developments of the twenty-first century. From the formation of our landscapes and the emergence of life, to the rise of hominins, the stone and iron ages, early settlement, migrations, wars and modern developments in the Magaliesberg - this new book uncovers the evolution of life up to the present.
